

Testimonial of Satisfied Cattleman:

My name is Tracy Lethbridge. I farm at Limerick, Saskatchewan and run 125 head.

I used to have Lewis oilers and then 1 by 1 I converted them over to the rope oilers using the rope conversion kit. The reasons I converted them was the Lewis was very high maintenance and I didn't like the pump system.

Now that I have the rope oilers things are different. Lower maintenance. I put them out and forget about them. Also the ropes apply the oil & chemical more efficiently than the wicks. Very Satisfied.

Tracy Lethbridge, Limerick, SK.

Convert Your Existing Cattle Oiler

The Pioneer Tip Hydraulic Valve opens & closes as the animals move the top of the rope against the valve tip. The valve applies oil and insecticide onto the top of the rope by gravity and the oil/insecticide spirals down the rope.

Complete Conversion of Blue Pump and Wick Oiler

The complete conversion allows the cattleman to convert the blue oiler to a rope (Clews Palliser) oiler and still use the stand of the blue oiler. This allows the cattleman the advantage of using already existing stands and in many cases they are straight and in good order.

This conversion is done by removing the square beam which holds the pumps on the top of the tank. The square beam is replaced by a bolt-on bracket which holds the valves and tank of the rope oiler. Once the bracket is in place, the tank and valves are installed on this bracket.

Since the ropes are longer than the wicks which have been removed, extension pipes are added to the long pipes on the blue oiler to accommodate the longer ropes. The ropes are then installed from the bracket to the extended pipes. The oiler then functions as a rope oiler on a blue oiler stand.

The rope is user friendly to the animals, wraps around the animal maximizing coverage and the animals rub directly on the rope. The animals will rub the rope in the face area thereby maximizing fly control and reducing pinkeye.

The cows are lined up to use the rope oiler.

My name is Paul Hofer. I am the cattle boss on the Rose Valley colony near Assiniboia, Sask.

Several years ago the colony converted 4 Lewis oilers over to the rope oilers using the rope conversion kit. The reason we did this was because we couldn't keep the pumps working on the Lewis oilers and when the flies were bad the oilers wouldn't work. The most expensive oiler is the one that doesn't work.

Since converting the oilers to the rope system our maintenance costs are very minimal and the oilers work all the time.

The ropes apply oil on to the animals rather than diesel fuel. The animal hair coats look like they have been combed and slicked up. They look much better than they did when we had Lewis oilers.

The ropes wrap around the animal's body and the oil spirals down the rope to where the animal is rubbing. The cattle use the rope more in the face area because the rope is more user friendly and the fly control in the face area is better than with a Lewis oiler. If flies can be controlled in the face area this goes a long way to preventing pinkeye problems. Now when the flies are bad the cattle are treated and out grazing and not hunched up in the fence corners. I wouldn't raise cattle without them and everyone should have the rope oilers.

- Paul Hoffer, Cattle Boss, Rose Valley Colony

Uses Environmentally Friendly Mineral Oil, No More Toxic Diesel, Better For Your Cattle, Better For The Environment

CATTLE OILERS

The Clews Palliser Cattle Oiler builds on the old practice of stretching a long piece of thick rope between 2 posts and soaking it with used motor oil and insecticide.

The Clews Palliser oiler still uses a long piece of thick rope but now the rope is mounted on a heavy duty 2 7/8" pipe stand and it features a Pioneer Hydraulic tip that lets out a controlled amount of **mineral oil** and insecticide onto the top of the rope as the cattle rub. The oil/insecticide mixture follows the spiral of the rope down to where the animal is rubbing.

Many cattlemen of today talk about how their fathers and grandfathers used rope oilers in the 40's, 50's and 60's and how much the cattle used the ropes and how durable the ropes were.

The salt/mineral feeder option ensures the cattle will use the oiler beneficently. The Clews Palliser Cattle Oiler features a see through tank allowing for ease in filling and checking the tank.

A must for the progressive cattleman!

My name is Scott Letts and we have a cow-calf operation at Westlock, AB We've used cattle oilers for over 30 years. In 2009 we began mounting Palliser conversion kits onto our Lewis frames and presently use 6 units year round. Some of the benefits we've experienced are:

- **Low maintenance**
 - simple valve verses complex pump
 - the rope stays clean verses a chain plugged with hair
- **Efficient**
 - translucent large capacity tank means drive-by checking and fewer fills
- **Easy to pick up with a tooth on tractor bucket and transport**
- **Fences are untouched**
- **Healthy hair coat**
 - the rope delivers oil down its full length with no spillage on the ground
 - the animal is visibly oiled from the nose to the tail
